

## **Imagining a Baby**

Bob Marcacci

for
Vito Sante
&
Angela Vita

uterus sheds lining

some women feel
mittelschmerz

egg & sperm meet
journey to center
of the uterus

pregnancy test
measures
pregnancy hormone
you embryo

your mother through early pregnancy without vomiting between head & tail neural folds fuse your heart beats

laryngotracheal groove forms primordia of liver pancreas lungs & stomach 4-6 mm from crown to rump we call you appleseed with your bulging heart your mother's face breaks out due to hormone changes appleseed becomes peanut no one can distinguish girls from boys at this point genital tubercle is present

doctors in China do not want to see your mother until the 3rd month gonads become either testes or ovaries spontaneous movement occurs elbows appear & ossification begins

you weigh 1 gram \ your toes begin to form this little piggy speaks Chinese this little piggy speaks none as placenta matures takes over hormone production your mother feels better

you mother can't see / the dr.
this week / when she talks to me
this little piggy cries
wee wee wee wee
all the way home
your eyelids fuse
& stay that way
for a while external
genitalia differentiates

a different Chinese hospital / your mother has 1st sonogram i am not allowed to enter your mother goes by herself / your head's about ½ of your body size your mother has not changed much \ your irises develop fingernails appear

you mother feels a little
better / her abdomen
expands \ your
fingers & toes / separate
placenta takes over
production of hormones
you secrete bile
your heart
beats / about
160 bpm

this week / beginning \
of the 2nd
trimester
you don't look like much
while your intestines
migrate / & 20 teeth
wait under gums
you swallow
amniotic fluid \
you can smile /

your mother visits her

3rd Chinese \hospital
she has a dark \ line
the linea negra \ down
the middle of her \ stomach
your body systems / work
on their own you / breathe
amniotic fluid which
regenerates itself
every 3 hours it is
partly composed of your urine

\ your eyelids are firmly shut /
/ lanugo covers your body
 your skin is thin
 if we could see
you \ we could see
/ blood vessels \
amniotic fluid
may smell of curry
cumin garlic onion &
other essences
in your mother's diet

your nails are well-formed your head is erect & you empty your bladder every 40-45 minutes your mother thinks \ she feels you move \ around you quicken or flutter \ like butterflies \ in the uterus \ as your limb movements\ become more coordinated\

you begin to form fat / under your skin / it will help maintain your body temperature when you are born / no new structures have formed / \ loud noises outside the uterus may startle you / your mother's \ body leaks it will go away when you are born you grow rapidly \\ bones continue to harden \\ fingerprints develop / pads on fingers & toes develop \ you / kick swallow & sleep intestines collect meconium your skin is still pink & transparent vour 4-chambered heart begins to build up muscle cells we get a head shot of you in the womb your mother records your heartbeat permanent teeth buds form behind already formed milk teeth buds vernix protects your skin from its aquatic environment you begin to store iron / for the production of red blood cells you can dream

```
the halfway point / your
mother can tell / when
vou are awake //
or sleeping //
you practice \ breathing motions
however you could not
survive outside\ \
your mother's body \
hair on your scalp \
starts to grow /
fully functional ears
allow you to enjoy
uterine noise all
your organs are formed
you can still move / all over
in amniotic fluid \
you form eyebrows / &
eyelashes you wake &\
sleep at regular
intervals you / ingest & \
absorb large / quantities
of amniotic
                fluid &
excrete urine your mother\
wants to / buy some new
clothes we walked around
holiday / Beijing this week \
                merry
```

christmas

Braxton Hicks \ contraction / your mother's uterine muscle / prepares for birth / lanugo darkens you get plumper lack subcutaneous fat your digestive / system mature enough to absorb nutrients sensor systems // mature bones of inner \ \ ear harden pancreas develops \ it is important / \ in production / \ of insulin you still \ have lots of room to move around

almost completely formed / you continue to \ gain weight in muscles / lungs & other organs continue to develop / deposit / brown fat which will help / you retain / body / heat you won't be / able to control your / body / temperature well when you / will be born your mother's fundus (top / / of the uterus) reaches approximately 1 &  $\backslash$  / ½ to 2 inches above her navel we feel you move often

bones / continue \ ossification process (they become harder) the \ structures / of your spine form \ while blood vessels of the lungs develop vour / nostrils / open we / decide to / leave Beijing the 3 of us & \ return to / Italy if we wait any longer we \ will not be able to \ leave / with \ vou in your short life you have already traveled with us \ in your / mother's womb around the world 2 times

your oil / & sweat \ glands function fingernails toenails eyebrows & evelashes continue // to grow until birth / you respond to sound & you \ have \\ dreamed about heartbeat digestion & other \ body functions & external \ noises for a long time you can /see light / your veins are visible \ through skin which \ changes from transparent to opaque as you add more baby fat your \ lungs develop \ air sacs secrete surfactant which \ will help / your lungs expand at birth we find / out you \ are a boy / a very good & very sad week \\ for / us

a boy / a very good &
very sad week \\ for / us
as / we say goodbye
to many friends /
in Beijing your mother
welcomes her \\
3rd trimester /
by \ leaving China
with me & you in her belly
after / watching Superbowl XLI
she cries when we leave
our / apartment your \ skin
wrinkled from floating in water
you will stay that way
until \ a few weeks / after birth
as you \ fill out / your skin

Rome: / not your \\ 1st flight Putignano: not your \ 1st train grandma & grandpa meet us & take us home / everything is up in the air your mother doesn't / even \ have a doctor now we have questions about \ episiotomy fetal monitoring & \\ pain relief some women's breasts \\ begin to leak / colostrum / which / indicates they can breastfeed \ your mother leaked from \ the 1st month as subcutaneous fat / is deposited we call \ you Vito / & talk to you a difficult \ week adjusting to life after \\ China you grow your \ mother / grows her internal / organs more crowded / she cries often discomforts of late pregnancy in her back & legs the amount of air in her \ lungs / we \\ talk to you you get \ ready /for \ your birthday / you /can / regulate your temperature you piss about ½ liter / of urine into amniotic fluid \ everyday your movements change at this point we feel \ you hiccup /

your mother's center of gravity \ changes her \ posture is important to your comfort // your permanent\ / /teeth wait in your gums you / are very / aware of your surroundings we talk to you \ & read you The Little Prince \ the uterus / can \\ be light or \ dark / depending upon our environment you / mother \ knows when you are awake or sleeping it \ seems like you sleep when she isn't / we often walk \ in the / evenings

for the 1st time an Italian doctor examines / you \ \ while learning to use / the new machine \\ the dr. says your \ femur \ is long he says something \ else is long & we / all laugh & you get bigger & fill up all the space your mother doesn't \ have much \ feeling / / in \ her hands the uterus displaces / internal organs from / now on \ you gain weight faster than you \ will grow / your irises dilate & contract \ in response to light due to deposits of white fat under \ the skin / it is no longer red but pink your mother's body produces relaxin

relaxin loosens & relaxes the pelvis \ her body / hair doesn't grow \\ much & when / she walks \ \ she / waddles her fundus is about \ 4 inches above / her navel & she / itches & she often has heartburn frequent urination \ constipation or indigestion did i \ mention / \\ itching & she would / hate it / if i said \ she had / hemorrhoids vou sleep 90-95% \ of the / day your skin thickens & you gain weight your movements peak this week & \ wrinkles / on your face disappear

your mother gets tired quickly starts to / do \ birth exercises with other mothers in the / hospital \ hallway /\\ she knows where your \ knees & elbows are & she feels / strange pains your brain \ continues to grow & increase the size of your head you / continue to / develop fat deposits under your skin you \ testicles / \ moved from \ their / location near kidneys through groin to scrotum // amniotic fluid \ almost / 2 pints \ will remain consistent \ until delivery surfactant coats alveoli \ in your lungs & helps you breathe / after birth

these days it rains often & we stay inside \ & \ watch TV you mother \ often takes \ a nap in \ the \ afternoon \ she \ can't \ sleep \ on her \ right side \ hormones from \ the placenta \ activate \ milk in your \ mother's \ breasts she has \ contractions at the dinner table & winces \ you can \ grasp \ firmly you open your eyes \ when awake & close them when sleeping \ your skin continues to thicken & you \ develop antibodies you urinate almost \ 1 pint each day where does it go \

your mother is 100 cm around her / middle we can't believe \ it / \ her back / starts to / hurt you can recognize \ us & / respond to our voices \ or / we think you do doctor's "visits" \ include checking the / cervix for \ signs of / effacement & dilation the indication that \ labor is // not far i write poems \ / like there's no tomorrow it's / my way to \ give birth to something your mother keeps saying she just / wants \ to see / your face

```
you continue to
put on weight
               /\\
as layers\of fat// \
pile on & help\/ /
  /regulate\body/
 /temperature &/
develop immunity
in preparation
for life/outside
the womb & the womb
gets/cramped/\\
your \mother feels
   more your\ knees
  /& elbows &\
it is painful/
 \ sometimes \
as\you continue
   to grow &/
  snuggle down
 into the pelvis
    your mother
  breathes more easily
```

the pregnancy is considered a "term" pregnancy/// at this point\\ // \ nothing will be/done /to stop labor/in most circumstances you practice/breathing movements /by\inhaling \amniotic /\ \fluid discomforts of/pregnancy wear your/mother down hands \& feet /swell she/is tired\ of/fighting her body to do what/she wants \your mother\ calls me to/ feel\ her belly when you hiccup you turn toward light & sound

```
your mother is sick
she coughs horribly
& worries about you \
she/can't \take/ /\
  /medicine\ & /
 / drinks warm milk
/with honey /\ her
\ belly sometimes
\feels hard\ \
vou moved / a little
lower/& your mother
doesn't have /
heartburn \ anymore
i / get sick \ too &
 /we spend a /weekend
 \in bed with\you we
 \lay in bed/
   with our / hands
     on the giant
     belly
```

```
nothing significant happens
we wonder if\we are\ready
your/mother says// she'll miss
you/inside\her\/ /\
both of us \have/
strange dreams /
every night
with only you\
to hope /for \ \
  \vour mother/
started reading \
 another book/
 about natural
birth babies
 come in time/
 \ on average\
  \mothers go/more
   \ than 4 / days
     past the due date
we think every day///
the / same thing//
you will \ arrive \
your mother \ / /
 /gets sick \
in the mornings
\ we walk //
in the evenings `~ `~
buy chocolate \
   \ / cigars \
    dr. says /
you're too high
 it's normal \
   for dates /
 \ to be off \
  \ about 4% /
  give birth/
    on their due date
```

```
